

Companion SL

Router software for cellular modems

Companion SL is a software application package that adds router and gateway capabilities to Sierra Wireless WP series intelligent cellular modules and to platforms such as FX30 modem as well as mangOH Red and mangOH Green boards. Running under Linux on Cortex A families of ARM processors, Companion SL simplifies cellular connectivity by adding a web based front end to Linux networking. Supported features includes connection management, IP address configuration, DHCP, DNS and APN management. More sophisticated features such as firewall, remote firmware upgrade, event logging and OpenVPN support will be available in subsequent releases.

**Eliminates scripting and programming on FX30.
No knowledge of Legato or Linux needed.
Simply plug and go !**

Companion SL on FX30

Companion SL on MangoH

Simplifies computer connectivity

Simplifies machine connectivity
